Application/Control Number: 10/809,486

Art Unit: 2627

In response to applicant's filing dated March 26, 2004. The following action is taken:

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Hiratsuka (7012862).

The reference shows a tracking servo control in an optical disk reading apparatus comprising: photo detection means having four segments 2a-2d, zero-cross detection circuits 18a and 18b, phase difference detection circuit 19 and LPF 11.

Claims 2 and 10 are objected to as being dependent upon a rejected base claim, but we uld be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

None of the cited prior art shows the use of a puise-generating unit and witching element as claimed in claims 2 or the use of the HPF.

Claims 3-9, and 11-36 are allowed.

None of the cited prior art shows the use of a HPF, and the pulse width detection circuits operating as claimed.

Application/Control Number: 10/809,486

Art Unit: 2627
